

PYQSide

JEE MAIN ELECTROCHEMISTRY — CONCEPT OF ΔG AND MAXIMUM WORK DONE BY A GALVANIC CELL — PYQS

Max. Marks: 12

Questions: 3

Section A (MCQ)

Q.1 Given at 298 K :

$$E_{\text{Fe}^{2+}/\text{Fe}}^{\ominus} = X \text{ Volt}$$

$$E_{\text{Fe}^{3+}/\text{Fe}}^{\ominus} = Y \text{ Volt}$$

The $E_{\text{Fe}^{3+}/\text{Fe}^{2+}}^{\ominus}$ in Volt at 298 K is given by :

- [JEE Main 2026 (Online) 8th April Evening Shift]
- (1) $2X - 3Y$ (2) $3Y - 2X$
 (3) $3Y + 2X$ (4) $Y + X$

Q.2 For a general redox reaction

Which of the following statement is incorrect?

- [JEE Main 2026 (Online) 6th April Evening Shift]
- (1) The overall reaction can be written as
 $n_2 \text{Red}_1 + n_1 \text{Ox}_2 \rightleftharpoons n_2 \text{Ox}_1^{n_1+} + n_1 \text{Red}_2^{n_2-}$
 (2) The electrons do not appear in the overall reaction because electrons produced at the anode are consumed at the cathode.

Here n is the number of electrons transferred in redox reaction.

- (4) If the reaction is carried out reversibly, the electrical work done is equal to the ratio of charge and potential difference through which charge is moved.

Section B (Numerical)

Q.3 Consider the following two half-cell reactions along with the standard reduction potential given :

$$E_{\text{red}}^{\ominus} = 0.02 \text{ V}$$

A fuel cell was set up using the above two reactions such that the cell operates under the standard condition of 1 bar pressure and 298 K temperature. The fuel cell works with 80% efficiency. If the work derived from the cell using 1 mol of CH_3OH is used to compress an ideal gas isothermally against a constant pressure of 1 kPa, then the change in the volume of the gas,

$$\Delta V = \text{_____ m}^3. \text{ (nearest integer)}$$

$$\text{Given : } F = 96500 \text{ C mol}^{-1}$$
