NEET SEMICONDUCTOR ELECTRONICS — SPECIAL PURPOSE DIODES: ZENER DIODE, LED, PHOTODIODE, SOLAR CELL — PYQS

Max. Marks: 48

Questions: 12

Section A (MCQ)

- Q.1** An ideal Zener diode with breakdown voltage of -3 V is reverse biased with a negative input voltage $V_i = -5\text{ V}$. The magnitude of voltage difference between point B and A is: [RE-NEET (UG) 2026]

Scan or tap for the full solution

- Q.2** Consider the following statements A and B and identify the correct answer :

- A. For a solar-cell, the I-V characteristics lies in the IV quadrant of the given graph.
 B. In a reverse biased pn junction diode, the current measured in (μA), is due to majority charge carriers. [NEET (UG) 2024]

- (1) A is correct but B is incorrect
 (2) A is incorrect but B is correct
 (3) Both A and B are correct
 (4) Both A and B are incorrect

Q.3

The I-V characteristics shown above are exhibited by a [RE-NEET (UG) 2024]

- (1) Light emitting diode (2) Zener diode
 (3) Photodiode (4) Solar cell

Scan or tap for the full solution

- Q.4** Given below are two statements:
Statement-I: Photovoltaic devices can convert optical radiation into electricity.
Statement-II: Zener diode is designed to operate under reverse bias in breakdown region.

In the light of the above statements, choose the most appropriate answer from the options given below :

[NEET (UG) 2023]

- (1) Both Statement-I and Statement-II are incorrect.
 (2) Statement-I is correct but Statement-II is incorrect.
 (3) Statement-I is incorrect but Statement-II is correct.
 (4) Both Statement-I and Statement-II are correct.

Scan or tap for the full solution

- Q.5** The incorrect statement about the property of a Zener diode is : [NEET (UG) 2022 (Phase 2)]

- (1) p and n regions of Zener diode are heavily doped
 (2) Zener voltage remains constant at breakdown
 (3) It is designed to operate under reverse bias
 (4) Depletion region formed is very wide

Scan or tap for the full solution

- Q.6** Consider the following statements (A) and (B) and identify the correct answer.

- (A) A Zener diode is connected in reverse bias, when used as a voltage regulator.
 (B) The potential barrier of p-n junction lies between 0.1 V to 0.3 V. [NEET (UG) 2021]

- (1) (A) is incorrect but (B) is correct.
 (2) (A) and (B) both are correct.
 (3) (A) and (B) both are incorrect.
 (4) (A) is correct and (B) is incorrect.

- Q.7** The given graph represents V-I characteristic for a semiconductor device.

Which of the following statement is correct ?

[AIPMT 2014]

- (1) It is V-I characteristic for solar cell where, point A represents open circuit voltage and point B short circuit current.
- (2) It is for a solar cell and points A and B represent open circuit voltage and current, respectively.
- (3) It is for a photodiode and points A and B represent open circuit voltage and current, respectively.
- (4) It is for a LED and points A and B represent open circuit voltage and short circuit current, respectively.

Scan or tap for the full solution

- Q.8** A Zener diode, having breakdown voltage equal to 15 V, is used in a voltage regulator circuit shown in figure. The current through the diode is

[AIPMT 2011 (Mains)]

- (1) 5 mA (2) 10 mA (3) 15 mA (4) 20 mA

Scan or tap for the full solution

- Q.9** A p-n photodiode is fabricated from a semiconductor with a band gap of 2.5 eV. It can detect a signal of wavelength

[AIPMT 2009]

- (1) 4000 nm (2) 6000 nm
(3) 4000 Å (4) 6000 Å

Scan or tap for the full solution

- Q.10** A p-n photodiode is made of a material with a band gap of 2.0 eV. The minimum frequency of the radiation that can be absorbed by the material is nearly

[AIPMT 2008]

- (1) 1×10^{14} Hz (2) 20×10^{14} Hz
(3) 10×10^{14} Hz (4) 5×10^{14} Hz

Scan or tap for the full solution

- Q.11** Zener diode is used for

[AIPMT 2005]

- (1) amplification
- (2) rectification
- (3) stabilisation
- (4) producing oscillations in an oscillator.

Scan or tap for the full solution

- Q.12** In a p-n junction photo cell, the value of the photo-electromotive force produced by monochromatic light is proportional to

[AIPMT 2005]

- (1) The barrier voltage at the p-n junction.
- (2) The intensity of the light falling on the cell.
- (3) The frequency of the light falling on the cell.
- (4) The voltage applied at the p-n junction.
